

SWAT Model

Mr. Nuttapong Pantong
Thai Meteorological
Department

www.tmd.go.th

Outline

- **Introduction**
- **SWAT Model Component**
- **Data required SWAT**
- **SWAT set-up**

Hydrologic Cycle

www.tmd.go.th

Soil and Water Assessment Tool

Introduction

- A river basin/watershed/scale model
- To predict the impact of land management practices on water, sediment and agricultural chemical yields over long period of time

Introduction

**Developed by USDA-
Agricultural Research Service (ARS)**

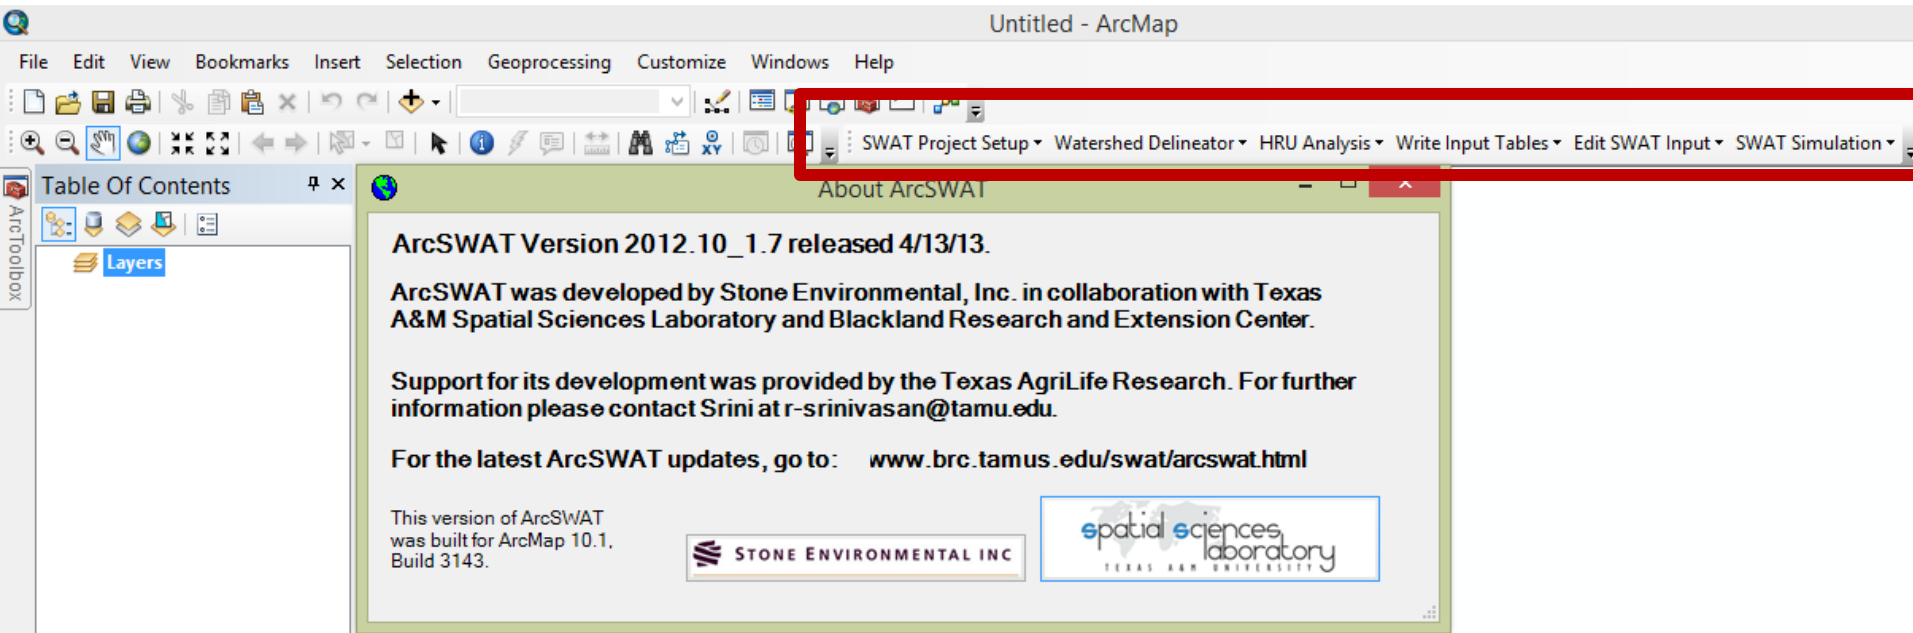

USLE	CREAMS (CLEANWATERACT)	EPIC	SWRRB	SWAT
1960's	1970's	1980's	1990's	
		GLEAMS	WEPP AGNPS	ANN AGNPS
AVSWAT	AVSWAT-X	ARCSWAT		
2000's	2003,2005's	2007's		

Introduction

ArcSWAT

- Extension of Arcgis
- Freeware (<http://swatmodel.tamu.edu>)

Introduction

- Continuous Time
Daily Time Step
One Day → Hundreds of Years
(Depend on Input Weather Data)
- Distributed Parameter
Unlimited Number of Sub watersheds

Management

- Crop Rotations
- Removal of Biomass as Harvest/Conversion of Biomass to Residue
- Tillage / Bio mixing of Soil
- Fertilizer Applications
- Grazing
- Pesticide Applications
- Irrigation
- Subsurface (Tile) Drainage
- Water Impoundment (e.g. Rice)
- Urban Areas(Pervious/Impervious Areas, Street Sweeping, Lawn Chemicals)

SWAT Model Component

SWAT Model Component

Land Phase

- Weather
- **Hydrology**
- Sedimentation
- Plant Growth
- Nutrient Cycling
- Pesticide Dynamics
- Management
- Bacteria

Routing Phase

- **Flood Routing**
- Transmission Losses, Evaporation
- Sediment Routing
- Nutrient
- Pesticide

Land Phase

Routing Phase

Hydrologic Cycle

$$SW_t = SW_0 + \sum_{i=1}^t (R_{day} - Q_{surf} - E_a - w_{seep} - Q_{gw})$$

Where:

SW_t = the soil water content after time step t of day i

SW_0 = the initial soil water content on day i

t = the time

R_{day} = the amount of precipitation on day i

Q_{surf} = the amount of surface runoff

E_a = the amount of evaporation

W_{seep} = the amount of water entering the unsaturated zone
from the soil profile

Q_{gw} = the amount of return flow as drainage to the surface
water.

**All parameters have the unit mm.*

Land Phase

Routing Phase

Land Phase

Routing Phase

Estimation

1. Surface Runoff : **SCS Curve Number Procedure**
and Green & Ampt infiltration depend on Land use, Land cover, Soil characteristic, Soil moisture.
2. Peak Runoff Rate : Approximate by **Modified Rational Formula**
3. Lateral Subsurface Flow
4. Groundwater Flow Shallow Aquifer & Deep

Land Phase

Routing Phase

Land Phase

Routing Phase

1. Routing in Main Channel or Reach
2. Routing in the Reservoir

Manning's Equation:

$$Q = VA = \left(\frac{1.49}{n} \right) AR^{\frac{2}{3}} \sqrt{S} \quad [\text{U.S.}]$$

$$Q = VA = \left(\frac{1.00}{n} \right) AR^{\frac{2}{3}} \sqrt{S} \quad [\text{SI}]$$

Where:

Q = Flow Rate, (ft³/s)

v = Velocity, (ft/s)

A = Flow Area, (ft²)

n = Manning's Roughness Coefficient

R = Hydraulic Radius, (ft)

S = Channel Slope, (ft/ft)

SWAT Strengths

Land phase

- Comprehensive Hydrologic Balance
- Physically-Based Inputs
- Plant Growth – Rotations, Crop Yields
- Nutrient Cycling in Soil
- Land Management - BMP
 - Tillage, Irrigation, Fertilizer, Pesticides,
 - Grazing, Rotations, Subsurface Drainage,
 - Urban-Lawn Chemicals, Street Sweeping

SWAT Strengths

Routing Phase

- Flexible Watershed Configuration
- Water Transfer—Irrigation Diversions
- Sediment Deposition/Scour
- Nutrient/Pesticide Transport
- Pond, Wetland and Reservoir Impacts

Data required SWAT Model

Spatial Data

- ☐ Digital Elevation Model
- ☐ Land use /Land cover map
- ☐ Soil classification map

Reservoir Data

- ☐ Reservoir characteristics
- ☐ Release data

Crop Data

- ☐ Crop calendar

Data required SWAT Model

Time Series Data

Weather Data

- ☐ Maximum / Minimum Temperature ($^{\circ}\text{C}$)
- ☐ Solar radiation (MJ/m^2)
- ☐ Wind speed (m/s)
- ☐ Relative humidity (fraction)
- ☐ **Rainfall (mm)**
- ☐ Evaporation
(including the locations of stations)

Hydrological Data

- ☐ River flow for calibrating the model

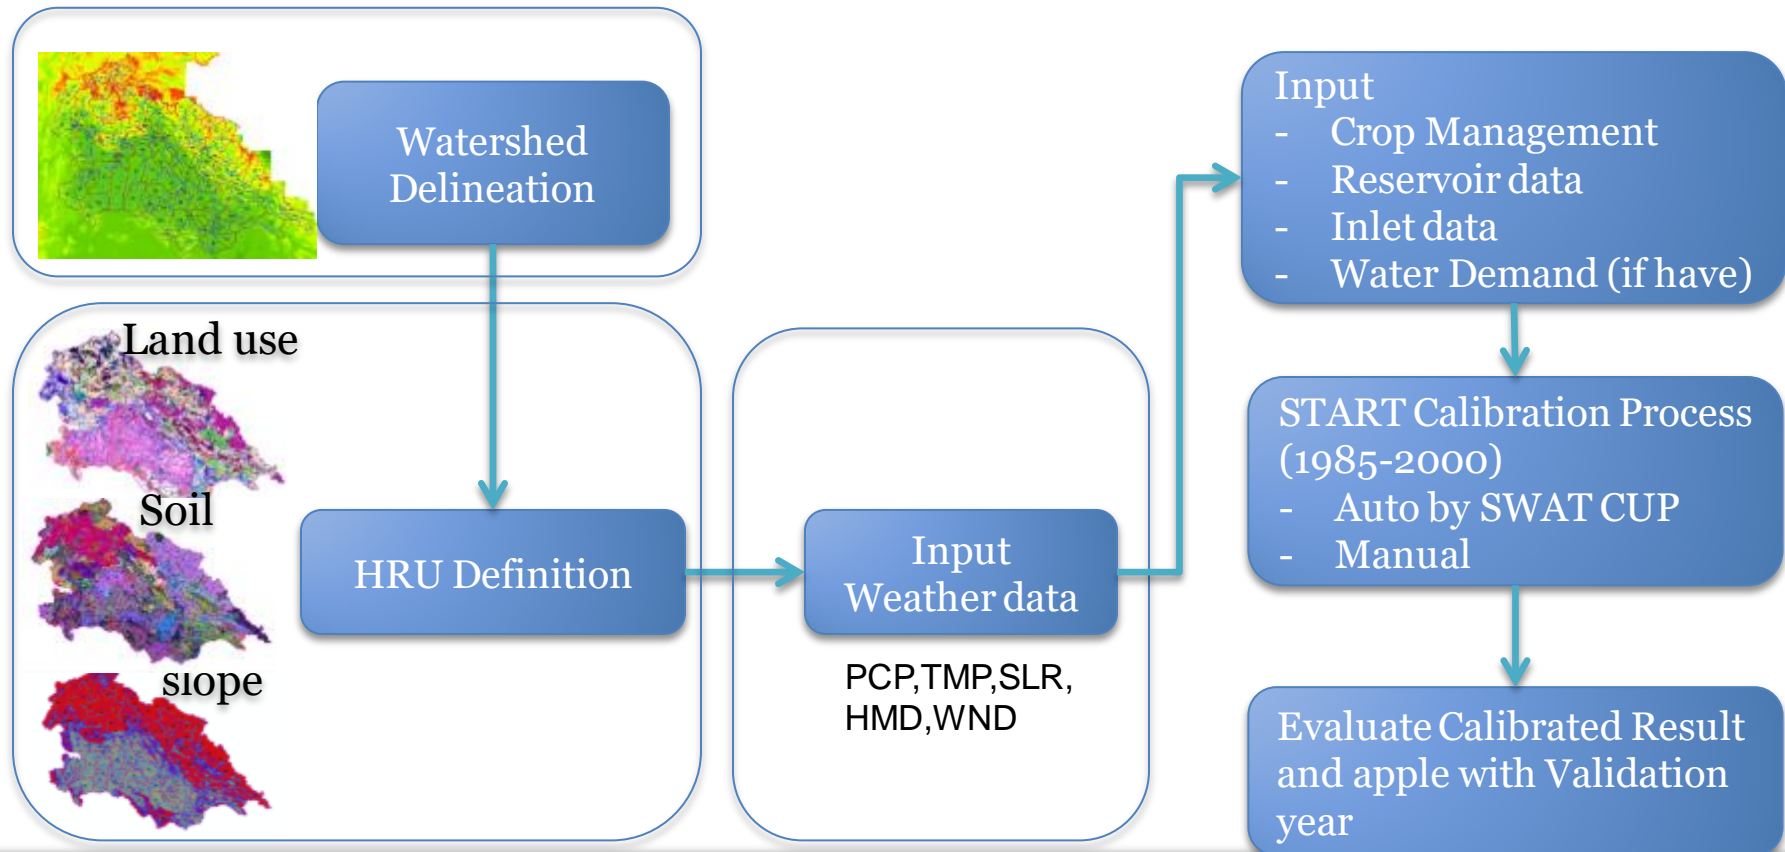

SWAT set-up

 SWAT2012LMB.mdb

*Prepare Database:
Land use, Soil, Weather*

Process of model set-up

Study Area : Nam-Mae-Ing basin

Exercise

- preparing weather data
- set up SWAT model
- run and see results
